

Immune Max 1000™

DESCRIPTION

Immune Max 1000™ is an undenatured whey protein isolate that contains vital proteins, peptides, and other key nutrients that enhance immune function. This product does not contain any genetically modified ingredients. Raw materials are sourced from American cows that are certified BSE-free.

molecule of glutamine and cysteine (glutamylcysteine dipeptides). The normal formation of the proteins is essential for the production of intracellular GSH.

PUBLISHED RESEARCH STUDIES*

Poor nutrition is an issue among senior adults which can lead to reduced immunity, increased healing time and loss of muscle tissue. In a recent study among elderly men they showed that using whey protein provided greater protein synthesis when compared with other proteins, such as casein.

Whey protein has been shown to stimulate immune system function. In a study looking at increases in particular immune markers it was seen that a formula containing whey protein had significant effect in boosting the number of polymorphonuclear cells and intracellular glutathione levels.

ADVERSE REACTIONS

Undenatured whey protein is usually safe for those with lactose intolerance, although it may cause allergic reaction to those allergic to Alpha Lactalbumin. Patients who are pregnant or have an existing health condition should consult a physician before use. Whey protein products are not recommended for people on immunosuppressant drugs.

RECOMMENDED USE

Mix one scoop with water or milk until powder is fully dispersed and drink once per day. For best results, drink at least 30 minutes before eating in the morning.

STORAGE

Immune Max 1000™ should be stored in a cool, dry, clean environment at temperatures below 25 °C (77 °F) and at relative humidity below 65%. Keep away from strong odors and other contaminants.

Item number: AM143

Delivery system: Powder (vanilla flavor)

Amount per bottle: 306 grams

Serving size: 1 scoop (approx. 10.2 grams)

BENEFITS*

- Undenatured whey protein powder that dissolve easily, mixes fast and has great flavor
- Super nutrients serum albumin, lactoferrin and beta lactoglobulin are precursors to glutathione, the essential antioxidant
- Enhances overall immune function and can help maintain optimal muscle tissue

INGREDIENTS PER SERVING

Provon® Undenatured Whey Protein Isolate (Typical Protein Composition: Beta-lactoglobulin 51%; Alpha-lactalbumin 23%; Glycomacropetides 18%; Bovine Serum Albumin and Immunoglobulins 5%; Lactoferrin, Lactoperoxidase and Others 2%); natural vanilla flavor.

MECHANISM OF ACTION

The components of whey protein, cysteine and glutamine/glutamate amino acids, alpha lactalbumin, serum albumin, lactoferrin and beta lactoglobulin, are precursors to, and required for the synthesis of, glutathione. Both cysteine and glutamine are primary components in the T-cell response of macrophages and lymphocytes. The regulating factors for glutathione (GSH) production lie in the combined
